# Office Action Summary

Application No.  
09/609,543

Applicant(s)  
JEFFERS et al.

Examiner  
Christine Saoud

Art Unit  
1647

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on Oct 7, 2002.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11; 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1 and 5-64 is/are pending in the application.
- 4a) Of the above, claim(s) 6-40, 42-45, and 47-62 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1, 5, 41, 46, 63, and 64 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claims \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.  
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
a) ☐ All b) ☐ Some\* c) ☐ None of:  
1. ☐ Certified copies of the priority documents have been received.  
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).  
\*See the attached detailed Office action for a list of the certified copies not received.
- 14) ☒ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).  
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☒ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s). 11, 14 6) ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### *Response to Amendment*

1. Claims 2-4 have been canceled, claims 1, 5, 41 and 46 have been amended, and claims 63-64 have been added as requested in the amendment of paper #13, filed 07 October 2002. Claims 1 and 5-64 are pending in the instant application.

Claims 6-40, 42-45 and 47-62 remain withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 9.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Any objection or rejection of record which is not expressly repeated in this action has been overcome by Applicant's response and withdrawn.

4. Applicant's arguments filed 07 October 2002 have been fully considered but they are not deemed to be persuasive.

### *Claim Rejections - 35 USC § 101*

5. Claims 1, 5, 41, 46 and 63-64 are rejected under 35 U.S.C. 101 because the claimed invention is drawn to an invention with no apparent or disclosed specific and substantial credible utility for the reasons of record as applied to claims 1-5, 41 and 46.

Applicant argues that the specification provides specific examples of utility. These arguments are not persuasive for the following reasons. (1) Amino acid sequence identity to other FGF proteins is not sufficient for establishing utility because structural analogy to a known compound with a known activity and utility is not sufficient evidence of utility for the claimed compound (see *Brenner v. Manson*, 148 U.S.P.Q. 689 (Sus. Ct. 1966)). (2) Conservation of an FGF family domain does not provide a specific, substantial and credible utility for the claimed compound because not all of the FGF proteins of the family have the same utility. In other words, conservation of structure does not result in conservation of function and this conclusion was supported by the Galzie et al. reference in the previous Office action. (3) The presence of an FGF internal hydrophobic transport domain does not provide a specific, substantial and credible utility for the claimed protein, although it is suggestive that the claimed protein is a new member of the FGF family. (4) The characteristic of binding heparin by the claimed protein does not establish a specific, substantial and credible utility, absent evidence to the contrary. (5)-(6) The biological activity of the claimed polypeptide in Examples 9-11 was noted in the previous Office action. The issue with the disclosed biological activity is that the instant specification teaches that administration of the polypeptide stimulates proliferation of fibroblasts in culture, but these cells also lose contact inhibition, meaning that the cells take on a transformed phenotype. The instant specification does not demonstrate an *in vivo* activity of the claimed polypeptide because Example

11 is directed to tumor formation by ectopic FGF-CX-transfected NIH 3T3 cells, which is not exogenous administration of the polypeptide *in vivo*. The activity of a cell line transfected with a protein is not predictive of the administration of the same polypeptide to an animal; one of ordinary skill in the art would not necessarily expect to obtain the same results and therefore, the same biological activity. Additionally, the instant specification does not teach a specific, substantial and credible utility for a protein which stimulates fibroblasts in culture, but also transforms them so that they lose contact inhibition. There is no "real world" use for such a protein with this activity, absent evidence to the contrary.

Applicant argues at page 5 of the response that the claimed invention is an FGF protein and that there is well-established utility for FGF proteins. This argument is not persuasive for the reasons of record in that there is no well-established utility for the FGF family because the biological activities for the members of the family are diverse and not all the members share a common function. This diversity was evidenced by Galzie et al., cited in the previous Office action. Applicant asserts that the claimed protein stimulates NIH 3T3 cells, and therefore, has been shown to stimulate cell growth and proliferation. However, this is not a complete characterization of the biological activity demonstrated for the claimed protein. The protein stimulates NIH 3T3 cells and also causes them to lose contact inhibition. This latter activity is not separable from the ability to stimulate proliferation, and the instant specification does not teach a utility for a protein which transforms cells as well as inducing proliferation. The specification asserts that the claimed invention could be used in a method of diagnosing, treating, preventing, or delaying a tissue proliferation-associated disorder, such as "tumors, restenosis, psoriasis,

Dupuytren's contracture, diabetic complications, Kaposi sarcoma, and rheumatoid arthritis" (see page 6, lines 3-7 of the specification), in a method of "treating a pathological state in a mammal" by administering the polypeptide (see page 5, line 6), in a method of "promoting growth of cells in a subject" wherein the cells are "in the vicinity of a wound, cells in the vascular system, cells involved in hematopoiesis, cells involved in erythropoiesis, cells in the lining of the gastrointestinal tract, and cells in hair follicles" (see page 5, lines 15-21), in "methods of diagnosing the presence or amounts of these compositions, in screening for and identifying therapeutic agents related to FGF-CX-associated pathologies, and in methods of treatment of various kinds of malignancy" (see sentence spanning pages 17-18), for use in screening assays, detection assays, predictive medicine, and methods of treatment (see sentence spanning pages 67-68), for stimulation of fibroblasts for use in wound healing (see page 76, lines 29-30), for stimulation of hematopoietic cells, immune system cells, and vascular smooth muscle cells, as well as for treating bone fractures and osteoporosis (see page 77, lines 1-3), diagnosis of cerebral tumors (page 77, lines 3-4), and for treatment of cancer (page 77, lines 9-13). However, neither the specification nor the prior art demonstrates a causal correlation or nexus of the claimed polypeptide with any of the conditions or disorders contemplated by the instant specification, therefore, there is no evidence of record that would provide for a method of treating/diagnosing any of the listed conditions or disorders. In addition, one of ordinary skill in the art would not believe the assertions to be credible for treatment of the above listed conditions in light of the evidence in the specification that the claimed invention transforms fibroblast cells in addition to stimulating proliferation.

Applicant argues at page 6 of the response that Galzie et al. does not support a case for lack of utility. This argument is not persuasive. Galzie et al. was cited to demonstrate that there is no well-established utility for the FGF family of proteins because each of the members has distinct and diverse activities even though structural similarity is present.

Applicant argues that the FGF-CX nucleic acids and the encoded polypeptide can be used diagnosing proliferative disorders. This argument is not persuasive because there is no evidence of correlation or nexus between the claimed invention and any disorder. The presence of the claimed invention in tissue would diagnose which condition? To employ the instant invention in any of the disclosed methods would clearly be using it as the object of further research which has been determined by the courts to be a utility which, alone, does not support patentability. The instant specification provides data on expression of the claimed protein, indicating that it is expressed in normal cerebellum, as well as in several human tumor cell lines without being expressed in corresponding normal tissues. The specification provides a chromosomal location for the FGF-CX and "[e]xpression of heterologous FGF-CX in NIH 3T3 cells is found to induce their transformation and tumorigenicity" (see page 17, lines 15-16). However, these disclosed properties of the claimed protein, expression pattern and ability to transform fibroblast cells in culture does not provide a specific, substantial and credible utility for the claimed polypeptides. Expression of the claimed polypeptide in cancer tissue does not establish a nexus between the claimed protein and cancer growth. Expression of the claimed polypeptide could just as likely be a result of the cancer, and not a causative agent, therefore one of ordinary skill in the art could not target the claimed polypeptide for treatment of the cancer. The instant specification fails to teach

that the claimed polypeptide is diagnostic for any specific cancer, as it is found in normal and diseased tissue.

Since the instant specification does not disclose a credible "real world" use for the claimed invention, it is incomplete and, therefore, does not meet the requirements of 35 U.S.C. §101 as being useful.

***Claim Rejections - 35 USC § 112***

6. Claims 1, 5, 41, 46 and 63-64 are rejected under 35 U.S.C. §112, first paragraph, as failing to adequately teach how to use the instant invention for those reasons given above with regard to the rejection of these claims under 35 U.S.C. §101.

7. Claim 5 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claim 5 recites the limitations of "retains the conserved amino acids of the FGF family motif located at residues 125, 127, 129, 136, 137, 141 and 148, and retains the hydrophobic transport domain between residues 92-120, wherein the residues are numbered with respect to SEQ ID NO:2". There is no basis in the instant specification for these limitations, contrary to Applicant's assertion. A careful review of the specification as originally filed, including pages 26-27, Examples 9-10 and Figures 16-18, failed to reveal these limitations or the inventive concept of

these limitations. Therefore, the claim is directed to subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

8. Claims 63-64 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claims 63 and 64 are directed to polypeptides having a post-translational modification other than a proteolytic cleavage, and specifically phosphorylation or N-myristoylation. However, the instant specification fails to provide a written description of that subject matter which is being claimed.

There is no disclosure of any post-translational modification of the polypeptide of SEQ ID NO:2. Additionally, there is no disclosure of phosphorylation or N-myristoylation, and it is not clear if the claimed polypeptide would even be able to undergo these post-translational modifications (i.e. proper amino acid sequence for such to occur or expression by a host which would perform these modifications, etc.). The claims are directed to proteins with modifications which may or may not occur, the structure of which cannot be determined or predicted from full-length amino acid sequence, with no evidence of isolation or conception of the structure thereof, therefore, the specification does not provide an adequate written description of the claimed proteins, and thus the claimed invention was not described in the specification in such a way as to

reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Vas-Cath Inc. v. Mahurkar, 19 USPQ2d 1111, makes clear that, "applicant must convey with reasonable clarity to those skilled in the art that, as of the filing date sought, he or she was in possession of the invention. The invention is for purposes of the 'written description' inquiry, whatever is now claimed." (See Vas-Cath at page 1116.)

With the exception of very particular amino acid sequences which are disclosed in the instant application, the skilled artisan cannot envision the detailed chemical structure of the encompassed polypeptide molecules and therefore conception is not achieved until reduction to practice has occurred, regardless of the complexity or simplicity of the method of protein expression. Adequate written description requires more than a mere statement that it is part of the invention and reference to a potential method for isolating it. The specific molecular structure is required. See Fiers v. Revel, 25 USPQ2d 1601, 1606 (CAFC 1993) and Amgen Inc. v. Chugai Pharmaceutical Co. Ltd., 18 USPQ2d 1016.

One cannot describe what one has not conceived. See Fiddes v. Baird, 30 USPQ2d 1481, 1483. In Fiddes v. Baird, claims directed to mammalian FGF's were found unpatentable due to lack of written description for the broad class. The specification provided only the bovine sequence. Applicant is reminded that Vas-Cath makes clear that the written description provision of 35 USC 112 is severable from its enablement provision. (See page 1115.) The instant claims are directed to a structure, which could be made, but for which, there is no written description. As in Fiddes v. Baird, claims directed to mammalian FGF's were found unpatentable due to lack

of written description for the broad class because the specification provided only the bovine sequence. In the instant situation, the specification only provides the full length protein, but fails to provide a description of the "broad class" of polypeptides having post-translational modifications regardless of whether they could be made or isolated.

### *Conclusion*

9. No claim is allowed.

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Christine J. Saoud, Ph.D., whose telephone number is (703) 305-7519. The Examiner can normally be reached on Monday to Thursday from 8AM to 2PM. If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, Gary Kunz, can be reached on (703) 308-4623.

Certain papers related to this application may be submitted to Technology Center 1600 by facsimile transmission. Papers should be faxed to Technology Center 1600 via the PTO Fax Center located in Crystal Mall 1 (CM1). The faxing of such papers must conform with the notices published in the Official Gazette, 1156 OG 61 (November 16, 1993) and 1157 OG 94 (December 28, 1993) (see 37 C.F.R. §§ 1.6(d) and 1.8). NOTE: If Applicant *does* submit a paper by fax, the original signed copy should be retained by Applicant or Applicant's representative. NO
